Desktop Productivity Management System

Application Name: Stretch

Project Overview

Stretch is a desktop productivity system designed to help students organize academic tasks, track study progress, and maintain effective study habits. Many students struggle to manage their academic workload due to the use of multiple separate tools for task management, study scheduling, and progress tracking.

The system integrates workload management, study logs, and Pomodoro-based study sessions into a single centralized platform. It allows users to manage academic tasks, record study sessions, and maintain focus through a built-in Pomodoro timer. By combining these functionalities, the system aims to help students improve time management, reduce procrastination, and increase overall study efficiency. The system also incorporates a task prioritization mechanism that helps users determine which tasks should be addressed first based on priority level, deadlines, and estimated completion time.

Objectives

The system aims to:

- Help students organize academic tasks and study workloads.
- Provide a structured system for tracking reading progress.
- Encourage focused study sessions through a Pomodoro timer.
- Improve productivity and reduce procrastination.
- Provide a centralized platform for managing academic responsibilities.

Target Users

The system is intended for:

- College and senior high school students
- Self-learners preparing for examinations
- Students managing multiple academic tasks and readings

System Features

Main Features:

1. **Workload Dashboard**
   The Workload Dashboard allows users to manage their academic tasks efficiently.
   Functions include:
   - Add new tasks
   - Edit existing tasks
   - Delete tasks
   - Set task priority
   - Set deadline or estimated duration

    - Add notes for additional information
2. **Reading Log**
   The Reading Log allows students to track their study materials and monitor reading progress.
   Functions include:
    - Add reading tasks
    - Track chapters or modules
    - Mark readings as completed
3. **Pomodoro Timer**
   The Pomodoro Timer help students maintain focus during study sessions.
   Features include:
    - Default timer with 25-minute focus sessions and 5-minute break intervals
    - Adjustable timer
    - Timer controls:
        - Start
        - Pause
        - Reset

Unique Features
Task Prioritizer
The Task Prioritizer automatically highlights which tasks should be completed first. The prioritization is based on.

- Task priority level
- Deadline
- Estimated duration

This feature helps students quickly decide what to work on when they have multiple pending tasks.

Tools and Technology

The system will be developed using the following tools and technologies

- IDE → **Microsoft Visual Studio**
- User Interface → **Windows Forms**
- Database → **SQL Server**
- Version Control → **Git / Github**

Future Enhancements

Possible future improvements include:

- **Calendar Spread** → Enables users to schedule tasks and study sessions visually for better time management.
- **Productivity & Study Reports** → Offers insights into study habits and task completion trends.
